

Handle disclosure & FOI requests without the backlog.

AI Redact removes the manual prep, detecting faces, voices and personal data across video, audio and documents, while your team keeps full review and approval.

FOI · SAR · Disclosure

One redaction workflow across every request type a team receives.

Human in the loop

AI does the heavy lifting; your team reviews and signs off every release.

Less backlog

Disclosure prep that used to stretch teams, compressed.

THE CHALLENGE

Every release has to be checked first.

FOI, SAR, legal disclosure and incident requests arrive with footage, audio and case files attached. Each one is reviewed and redacted by hand before anything can be released.

- FOI & Subject Access Requests
- Legal & regulatory disclosure
- Incident & investigation requests

WHAT AI REDACT DOES

Removes the manual prep. Your team stays in control.

- ✓ Detects faces, voices and personal data automatically, across every request.
- ✓ Applies redaction across video, audio and documents in one consistent process.
- ✓ Keeps full human review and approval in place. Nothing is released without sign-off.

HOW IT WORKS

Four steps, one supervised pass.

1

Upload

Bring in footage, audio or documents for the request.

2

AI identifies

Sensitive content is detected automatically across formats.

3

Select & redact

People, faces, objects and licence plates are identified and easy to select for redaction.

4

Review & approve

Your team checks, adjusts and confirms before release.

AI handles the manual prep; your team confirms every output.

What changes

FOR DISCLOSURE & INFORMATION GOVERNANCE TEAMS

Faster response times

Meet FOI and SAR deadlines instead of waiting on prep.

One workflow, all formats

Video, audio and documents handled in a single process.

Easy online sharing

Release redacted files by secure link.

Lower-risk disclosure

Consistent, defensible handling reduces disclosure errors.

WHERE IT FITS

The requests already on your desk.

AI Redact slots into existing disclosure and information governance processes. No new process to learn.

01

Blue light services

Securely manage and share operational evidence, improving governance while reducing administrative effort.

POLICE · FIRE · AMBULANCE

02

Transport

Maintain a single source of truth for incident records, supporting compliance and faster access to critical information.

RAIL · BUS · FLEET

03

Retail

Simplify in-store evidence management with secure storage and straightforward transfer of footage and records to police.

RETAIL · LOSS PREVENTION

If disclosure and redaction are creating backlogs, there's a more efficient way.

Introducing Aetopia Evidence: a dedicated, UK-based hosting environment running Aetopia Digital Evidence Management and Aetopia AI Redact. Evidence is collected and stored securely, then redacted and released from the same place. Book a demo to see the solution in action, using your own request types, formats and governance rules.
